

"The story so far..."

An Interim Bibliography of Hans-Otto Baral for the Years 1981-2014

Mise en ligne le 18/12/2014

Hans-Otto Baral, aka "Zotto", has contributed a vast amount of papers and digital publications which have inspired not only his academic colleagues but also the community of amateur mycologists, whose efforts he has included in his ascomycete research for decades, thus helping stimulate their own work. This compilation of his publications and ephemeral works to date is also intended as a guide for all those who are unaware of its extent, and includes keys and some otherwise unpublished papers shared on the DVD "In Vivo Veritas 2005".

The form "H.-O." Baral as opposed to "H. O." Baral has been used consistently throughout, though it varies in the different publications. Only names of genera and species are set in italics even if this deviates from the original titles.

Links to free online versions of printed publications, if available, are provided in square brackets.
